

Spring 2021 Instruction Modes

Instruction

Consistent with the original Fall Flex plan, spring semester instruction will entail two types of courses: 1) Flex courses, which combine in-person and remote instruction; and 2) fully remote courses. There will be no “in-person only” courses.

Addressing a possible confusion from the fall plan, let me clarify that although Flex courses offer an in-person component, students may take Flex courses fully remotely if they choose to do so. If during the course of the semester, a student who has been taking a Flex course remotely wishes to attend this Flex class in person, they may do so with notification to the faculty member. Similarly, a student who has been participating in person in a Flex course may switch to remote instruction in the Flex course during the semester, with notification to the faculty member.

Consistent with physical distancing rules and health and safety standards, we will limit the number and density of students in an in-person classroom. This may require faculty to establish a rotating schedule by which enrolled students take turns attending in person and remotely.

Class Capacity	20	Wait List Capacity	0
Enrollment Total	1	Wait List Total	0
Available Seats	19		

Description
Introduces the student to the concepts of mechanical design through the use of solid modeling of machine and product elements, exercises in reverse engineering, and the design of a simple machine. The course endeavors to provide the student the experience of learning a concept by analysis (reverse engineering), giving form to this concept through 3-D modeling, and finally applying the concept(s) in a simple mechanical design.

Textbook/Other Materials
Textbooks to be determined

3. Students may use “Mode of Instruction” as a criteria for searching for classes
